

The Counterpoint Tactical Municipal Fund (TMNIX) Now Available at UBS

San Diego, California – May 1, 2023 – Counterpoint Funds, a quantitative mutual fund and ETF provider specializing in defensive diversifier strategies, today announced the availability of the **Counterpoint Tactical Municipal Fund (TMNIX)** at UBS.

The agreement gives UBS advisors access to TMNIX, a 5-Star Morningstar rated fund overall¹ in the high yield muni fund category out of 197 funds based on risk-adjusted returns ending March 31, 2023 by Morningstar Inc., a leading provider of independent investment research. Additionally, the fund is ranked 1st out of 204 funds and 6th out of 197 funds in the high yield muni fund category, for 1-year and 3-year periods respectively, based on total returns ending March 31, 2023.

“The Counterpoint Tactical Municipal Fund is a great addition at UBS, offering advisors a systematic, defensive fixed income diversifier strategy designed to deliver superior risk-adjusted tax-free returns for client portfolios while managing downside risk,” said Michael Taylor, Director of Institutional Partnerships at Counterpoint Funds.

Developed by Counterpoint Funds, the Counterpoint Tactical Municipal Fund (TMNIX) launched Jun., 2018, and had \$208.4 million in net portfolio assets as of Apr. 26, 2023. Leveraging a binary municipal high yield trend-following strategy, Counterpoint Tactical Municipal Fund seeks tax-free income and capital preservation by providing municipal high-yield like returns during stable or recovering market environments and switching exposure to municipal money market in times of market stress.

“The risk management strategy utilized by TMNIX has shown strong resilience in today’s rising rate environment and has continued to perform, beating both its’ benchmark and Morningstar fund category last year as well as since inception,” added Mr. Taylor. “Additionally, the fund’s historically low correlation to traditional municipal bonds can make it a great tax-free fixed income diversifier for client portfolios at UBS.”

Important Risk Information

Mutual Funds involve risk including the possible loss of principal. The use of leverage by the Fund or an Underlying Fund, such as borrowing money to purchase securities or the use of derivatives, will indirectly cause the Fund to incur additional expenses and magnify the Fund's gains or losses. Derivative instruments involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. Past performance is no guarantee of future results. There is no assurance the Fund will meet their stated objectives.

Investments cannot be made in an index. Unmanaged index returns do not reflect any fees, expenses or sales charges. Past performance is no guarantee of future results. There is no guarantee that any investment will achieve its objectives, generate positive returns, or avoid losses. The Adviser's reliance on its strategy and judgments about the attractiveness, value and potential appreciation of particular securities and the tactical allocation among investments may prove to be incorrect and may not produce the desired results. No level of diversification can ensure profits or guarantee against loss.

Index Definitions

The Bloomberg Barclays Capital High Yield Municipal Bond Index is an unmanaged index made up of bonds that are non-investment grade, or unrated by Moody's Investors Service with a remaining maturity of at least 1 year. The Morningstar US High Yield Muni Category is made up of portfolios that typically invest a substantial portion of assets in high-income municipal securities

that are not rated or that are rated at the level of or below BBB (considered high-yield within the municipal-bond industry) by a major ratings agency such as Standard & Poor's or Moody's.

Definitions

Return is the percentage change in the value of an investment, and/or cash flows which the investor receives from that investment, such as interest payments, coupons, cash dividends, stock dividends or the payoff from a derivative or structured product, over a specified time period.

Maximum Drawdown (Max Drawdown) is the maximum observed loss from a peak to a trough of a portfolio, before a new peak is attained and can be used as an indicator of downside risk over a specified time period.

Standard Deviation (Std Dev) measures the dispersion of returns relative to its mean to determine the volatility of an investment and is calculated as the square root of the variance by determining the deviation of daily returns relative to the mean.

Sharpe Ratio compares the return of an investment with its risk by dividing its' excess returns, which are returns that are above an industry benchmark or the risk-free rate of return, by a measure of its volatility to assess risk-adjusted performance.

Morningstar

The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

The Morningstar Rating for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The Morningstar Rating is for the Institutional, A-share, and C-share class. Morningstar Percentile Rankings are based on the average annual total returns of the funds in the category for the periods stated and do not include any sales charges or redemption fees. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. Rankings for each share class will vary due to different expenses. (TMNIX) has a percentile rank of 1st out of 204 funds and 6th out of 197 funds in the high yield muni fund category based on total returns, for the 1 and 3-year time periods respectively, ending March 31, 2023.
